Resident Data for GPS Units*

H₂Safety Services Inc. has developed a Secure Digital (SD) data card for use in existing GPS units that will use H₂Safety collected and verified field and mapping data to provide clear driving directions to locate specific residents.

The use of this SD card will allow any user to locate a resident within the specified area using hands-free voice guided driving directions. This will allow for emergency responders such as rover personnel to efficiently and accurately locate any resident in need of assistance during an emergency.

In addition to resident data, these cards come equipped with optional industry information customizable to your needs.

Price List

■ Resident Data for GPS units

Contact Us!

1 x SD Card with the following data included to be viewable on existing GPS units:

- Field and mapping data processed and formatted.
- Lease Tracker™ - system using ATS reference system (LSD, Section, Township, Range and Meridian) that allows users to find any oil and gas related location.

■ Additional SD Cards
